PROVO TEMPLE

Overlooking the lush Utah Valley and the adjoining campus of the 25,000 student Brigham Young University in Provo, Utah, is this Temple of the Church of Jesus Christ of Latter-Day Saints. Students from all 50 states and many foreign nations including all races attend the B.Y.U. In Mormon Temples sacred ordinances including marriage for time and eternity are performed. One of 16 throughout the world, the Provo Temple was open to the public for tours until its dedication in 1972.

MILLENNIUM OF TYNWALD ISLE OF MAN

The Isle of Man holds a special celebration in 1979—the marking of 1,000 years of its parliament of Tynwald, founded by the Vikings and now the oldest assembly in the world with unbroken traditions.

Constitutionally, the position of the Isle of Man is unique. It is not and never has been part of the United Kingdom. It is a possession of the Crown and has a very large degree of autonomy. One thousand years ago, the Island came under the domination of the invading Norsemen from Scandinavia—the Vikings. They set up their kingdom of Mann and the Isles with a form of government based on the principle of freemen knowing the law and observing it. The proclamation of this law took place on occasions like the pagan feast of the Summer Solstice, usually to an assembly in an open field. The tradition is upheld and according to custom, on 5th July there is the open-air assembly at the meeting place of the Vikings, the parliament field (in old Norse, Thing Vollr) on Tynwald Hill.

Enquiries to: Millennium,
Government Buildings,
Isle of Man.

ABU-AIL DXPEDITION 1980

RADIO	DATE	TIME	MHz	REPORT 2X
W9TE	DEC. 8 '80	0315 GMT	14	SSB 59 CW

Abu-Ail is located in the Red Sea at 14°, 5' North, 42°, 49' East. The islands are of volcanic origin and there is no life other than that brought by humans on the island except for an occasional bird. The fort on the top of the rock was built by the Turks approximately two-hundred years ago and was named Abu-Ali but somehow through misspelling it has come to be known as Abu-Ail. The purpose of the lighthouse is for navigation purposes. Those ships travelling north of the lighthouse toward the Suez Canal are navigated to the east side of the rock and those travelling south to the west side of the rock. Our crew, which consisted of J28AZ, K6LPL, DJ9ZB, TU2IR, and F6ATQ departed from Djibouti on December 4, 1980. It was a slightly rough but uneventful sail of twenty hours to the island. We arrived in the late evening and made a very difficult and treacherous landing in which we sustained minor injuries. The boat was completely off loaded by dusk and by flashlight we made our way to the base of the mountain from the landing site into a stable where we got a generator going and made our first contact. The next morning at dawn, we ascended the 100 meter high mountain carrying the generators and radio equipment on our backs up a very steep and treacherous pathway and we were on the air four hours later. Winds were a continuous problem on the DXpedition and during our landing exceeded 50 miles per hour. It never did seem to stop blowing the entire time we were there although the temperature was quite pleasant both day and night. Operation continued for approximately 100 hours and a total of 16,000 contacts were made. Due to power limitations and interference between the stations, only two stations could be used at one time.

After a very pleasant and enjoyable stay, which was somewhat marred by the continuous breakdown of the generators, we departed around 6:00 A.M. on December 12, 1980, and sailed directly into a 48 hour storm. Conditions were extremely difficult and we arrived in Djibouti over a day late and we all missed our plane connections. We all swore "Never Again" and by the time the next day had come around, we were all talking about a new DXpedition.

Special thanks go to W6ORD, Wilson Antenna Company, the Southern California DX Club, and the West Coast DX Foundation for support.

KIRUNA

LAPPLAND
SWEDEN

Kiruna is the world's largest city in area. The name Kiruna is Lappish and means "mountain grouse". The city is Sweden's most northerly, lying a hundred miles north of the Arctic Circle on the same latitude as the tundras of Alaska and Siberia. The built-up area between the two mountains of iron-ore, Kiirunavaara and Luossavaara, makes up the central part of this remarkable city and is therefore called Kiruna C. The total population of the city of Kiruna in 1981 is about 30,000. Most of Kiruna's vast area consists of wilderness-forests, swamps and mountains with rivers and lakes teeming with fish. The mountainous areas of the west contain some of the most famous natural scenery in the country, including the Mere of Torne, the Valley of Vistas and Mount Kebnekaise, the highest in Sweden.

THE MIDNIGHT SUN is the great miracle of this northernmost part of the country. For six weeks in the summer there is uninterrupted daylight, and if it is not cloudy you can witness the fascinating drama when the sun begins to go up again without having ever dropped below the horizon. You can see the midnight sun in Kiruna C from May 31 to July 14. In contrast to this prodigality of light during the summer, the sun disappears entirely for several weeks around the winter solstice. But then you can instead experience the Aurora Borealis of Lappland; which brightens the whole firmament with flaming curtains of light.

KIRUNA, the mining town, has had a short but remarkable history. In 1890 the Luossavaara—Kiirunavaara Company, Inc. was founded, and the ore railway to Narvik was inaugurated in 1903. From the first collection of primitive huts for engineers and laborers' barracks in the wilderness around lake Luossajärvi, Kiruna C has developed into a modern community with about 20,000 inhabitants. This unique city, located between 1500 and 1800 feet above sea level just below the timber line, has a church constructed like a large Lappish hut and a city park filled with mountain birches, from which you can, in clear weather see the peaks of Kebnekaise. The ore in Kiruna consists of a slab about 100 yards thick and about three miles long going vertically into the earth to a depth of a mile. It is estimated that this contains about 2.5 billion tons of ore, which ought to last a couple of hundred years. Kiirunavaara closed its open pit in 1960 and then became the biggest underground-mine in the world. In summer it can be visited by bus.

Information about hotels, mountain stations, cabins and Lapp huts, hiking trails, private rooms, hostels and camping places is available at the tourist associations and travel bureaus, as well as directly from the Tourist Committee of the City of Kiruna.

------	------------	----------	----	---------------

Abu-Ail is located in the Red Sea at 14°, 5' North, 42°, 49' East. The islands are of volcanic origin and there is no life other than that brought by humans on the island except for an occasional bird. The fort on the top of the rock was built by the Turks approximately two-hundred years ago and was named Abu-Ali but somehow through misspelling it has come to be known as Abu-Ail. The purpose of the lighthouse is for navigation purposes. Those ships travelling north of the lighthouse toward the Suez Canal are navigated to the east side of the rock and those travelling south to the west side of the rock. Our crew, which consisted of J28AZ, K6LPL, DJ9ZB, TU2IR, and F6ATQ departed from Djibouti on December 4, 1980. It was a slightly rough but uneventful sail of twenty hours to the island. We arrived in the late evening and made a very difficult and treacherous landing in which we sustained minor injuries. The boat was completely off loaded by dusk and by flashlight we made our way to the base of the mountain from the landing site into a stable where we got a generator going and made our first contact. The next morning at dawn, we ascended the 100 meter high mountain carrying the generators and radio equipment on our backs up a very steep and treacherous pathway and we were on the air four hours later. Winds were a continuous problem on the DXpedition and during our landing exceeded 50 miles per hour. It never did seem to stop blowing the entire time we were there although the temperature was quite pleasant both day and night. Operation continued for approximately 100 hours and a total of 16,000 contacts were made. Due to power limitations and interference between the stations, only two stations could be used at one time.

After a very pleasant and enjoyable stay, which was somewhat marred by the continuous breakdown of the generators, we departed around 6:00 A.M. on December 12, 1980, and sailed directly into a 48 hour storm. Conditions were extremely difficult and we arrived in Djibouti over a day late and we all missed our plane connections. We all swore "Never Again" and by the time the next day had come around, we were all talking about a new DXpedition.

Special thanks go to W6ORD, Wilson Antenna Company, the Southern California DX Club, and the West Coast DX Foundation for support.

THS a million dear Jolien
for the nice dso. Congratulations
for your antennas, certainly
you get a big place; but in
Paris I cannot do the same.
Lucky with my TH3 on the
terrace and it makes HP
a bow-wow far from the street.
Good DX Jolien
